**The environmentally-friendly
Refill Mop from Robert Scott**

A patented, eco-friendly and cost-effective mop with detachable, reusable sockets.

Robert Scott is the UK's largest manufacturer of socket mops, supplying some 23 million a year to the commercial cleaning sector.

That's why it's important that we do this in a responsible way, and why we make mops using 100% recycled fabric in our mills in Lancashire. This reuses a by-product that would have otherwise have ended up as waste in landfill.

However, as mops are semi-disposable we wanted to go further and that's why we invented the Refill Socket Mop, which consists of a reusable socket and semi-disposable yarn refill. This means the socket can be used time and time again, while the disposable yarn refills are much easier to recycle at end of life.

Plus, it's colour coded to prevent cross-contamination, making it a more hygienic, cost-effective and eco-friendly way to mop.

Key features & benefits

- An environmentally-friendly alternative to the traditional socket mop.
- Easy to fit, washable and long lasting.
- Choice of cotton-rich mop, or low-linting, highly absorbent Big White mop.
- Cost-effective as only dispose of yarn.

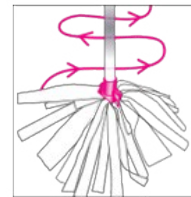

How to use

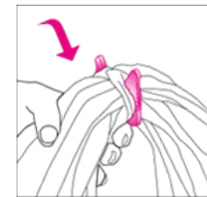

Fit mop head into socket

Secure socket with handle

Mop floor

Replaced with new mop head

How much plastic would you save?

The average socket contains 25g of plastic. So, multiply the number of mops you use a week, month or year by 0.025 to calculate the kilograms of plastic saved.

If all of our mops were Refill mops we would save nearly 600 tonnes a year; the equivalent of 30 million plastic bottles or the weight of 50 double decker buses.
