Enclosed fire retatrdant pedal bin

A new fire retardant pedal bin that's designed to be perfect for clinical waste.

A sturdy fully eclosed fire retardant and foot operated pedal bin, which is manufactured in the UK. It is available in three sizes, seven lid colours (black, orange, white, blue, green, yellow, red) to help with segregation of waste, and with the option of a soft-closing lid.

The black, orange and white lids are coated with anti-microbial paint making it ideal for medical waste to reduce any risk of harmful bacteria speading on the surface of the bin. This antibacterial feature uses silver-ion coating to absorb and destroy harmful bacterium.

The black lid models are available as standard and there is a three week lead-time for all other colours and the soft closing option.

Key features & benefits

- Hands-free frame and foot pedal operation.
- Antibacterial coating to minimise the spread of infection on black, orange and white lids.
- Ideal for clinical settings such as treatment rooms and toilet areas.
- Corrosion resistant and fire retardant.
- Colour coded lids for the management of waste segregation.
- Option of a soft-closing mechanism.

User instructions

To empty, press the foot pedal and pull the frame of the lid upwards to release the bag. To replace with a new bag, fold the sides of the bag over the edges of the bin and pull the frame down to hold it in place again. Release the pedal.

Material

Manufactured from corrosion resistant galvanised steel and all metal fixings.
